OFFLINE DESIGN
calibrate ranges on $\mathcal{D}_c$
enumerate $\mathcal{O}^L$: acc + energy on $\mathcal{D}_v$
extract Pareto frontier $\mathcal{P}$
select $C_{\text{lo}}, C_{\text{hi}}$; fit temperature $T^\star$
choose $\tau^\star$ (meet acc target)
deploy $(C_{\text{lo}}, C_{\text{hi}}, T^\star, \tau^\star)$
ONLINE INFERENCE
input x arrives
cheap pass $C_{\text{lo}} \rightarrow g(x)$ (cost E_{lo})
$g(x) \geq \tau^\star$?
yes
no
accept $\hat{y}_{C_{\text{lo}}}$
run C_{hi} $\hat{y}_{C_{\text{hi}}}$
